Page Layout

Using the Bootstrap grid system, create a web page (Home page) layout for small devices as given in the below snapshot:

Topic Coverage: Bootstrap Grid System, Container fluid classes

Key points to be noted:

- 1. Create a **three-column layout** for the web page for small devices.
- 2. Layout should contain a row with three columns divided in a **1:4:1** ratio for the small devices.
- 3. Column 1 and 3 should belong to the Bootstrap's side navigation class of a <div> tag with the id "col1" and "col3". set the class as: **'col-sm-2'** and **'sidenav'** respectively. (classes should be in the same order specified.)
- 4. In **column 2**, the **text** should be **left-aligned**, use the appropriate class for the **div** tag with id **'col2'**.
- 5. The **footer** of the web page should be Bootstrap's **fluid container** with **centered text**.

Note:
Some of the components of the web page are already been created. You have to write the code only for the parts (for column1, column 2, column3, and footer except for the text content) that are mentioned in the template.
