## Alternate Rows - Selectors

Design a webpage that displays a customer information table. The alternate rows of the table need to be colored using jQuery as depicted in the web page image given below. Refer to the notes for more clarifications.

**Concepts Coverage:-** jQuery Selectors [Table element selectors]

Web page snapshot:

Customer Information		
Customer No.	Custome Name	Contact No.
Z1021	Kim Walker	9996648390
Z3985	Jack Welington	8993648391
Z6849	John Rambo	7809368394
Z6850	Mary Carter	8809364594
Z6830	John Rambo	7809368394

**Note:**

1. The HTML part of the program is given as a template. You have to write the jQuery script only in the 'script.js' file.
2. The background color of the table caption and odd rows of the table should be 'light blue' and even rows of the table should be 'light pink'. Observe the above table image for more details.
3. Avoid writing the jQuery 'document ready' method for the proper web page visibility.
4. Do not use 'ES6' features.
